Warning:

Caution – Risk of Shock

- This product must be installed in accordance with the applicable installation code by a person familiar with the construction and operation of the product and the hazards involved.
- LEDs are ESD (Electro Static Discharge) sensitive devices that can be easily damaged if the proper ESD mitigating steps are not taken.
- LEDs are very sensitive to mechanical damage. Caution must be taken to avoid damage to the LEDs.
- Do not use power tools to fasten the boards into the fixture. Over-torquing the LED board fasteners will damage the boards.
- Make sure all electrical power is turned off while installing the fixture.
- This luminaire must be adequately grounded for protection against shock hazards and to assure proper operation.
- Disconnect power before servicing.

STAND-ALONE ASSEMBLY

Step 1: T-bar mounting bracket halves are supplied as a one-piece metal stamping. Break mounting bracket apart. Insert 1/4-20 threaded stud into “A” half of bracket (Fig. 1).

Step 2: For T-bar ceiling, install mounting brackets at desired locations. Brackets must be placed exactly on each mounting point for correct installation and hanging of cables.

MOUNTING INFORMATION

<table>
<thead>
<tr>
<th>Nominal Unit Length</th>
<th>Mounting Length (A)</th>
<th>Actual Length (B)</th>
</tr>
</thead>
<tbody>
<tr>
<td>2’</td>
<td>24-5/8”</td>
<td>25-7/8”</td>
</tr>
<tr>
<td>4’</td>
<td>46-13/16”</td>
<td>48-1/16”</td>
</tr>
<tr>
<td>8’</td>
<td>89-7/8”</td>
<td>91-1/8”</td>
</tr>
</tbody>
</table>

Step 3: T-bar mounting bracket halves interlock. Snap side “B” together with side “A” around T-bar. (Fig. 2).

Step 4: Suspension locations must be securely supported to the structure before hanging light fixtures onto brackets. Use 12-gauge or stronger steel ceiling support wire (Fig. 3).
Step 5: Place the canopy flush to ceiling tile and thread upper cable retainer onto the 1/4 - 20 stud (Fig. 3).

A stand-alone fixture will require two suspension cables. The 5” diameter canopy will be used only at power feed locations. Smaller 2” canopies are to be used at non-feed locations (Fig. 4). Power feed cord will pass through hole with plastic strain relief bushing.

Note: For safety, always support the weight of the fixture. Do not leave a fixture hanging by only one end while working.

Step 6: Hang the fixture from suspension cables by hooking into each end of light fixture. Install 10 - 32 flange nuts from the hardware kit onto threaded cable end and adjust up or down as necessary until fixture is level (Fig. 5A). Fully adjustable cables allow you to vary the length from 6” to 96” with a stopping device that may be secured at any point along the length of cable. One 10 - 32 flange nut from the hardware kit secures the fixture.

Note: When hanging the junction box onto the T-bar mounting bracket, tie the ceiling support wire for this location directly to the T-bar.
ROW ASSEMBLY

Power Feed Hardware:
Each power feed hardware kit includes the following:
(1) Assembly & Installation Instructions
(2) T-bar mounting brackets & 1/4” - 20 studs
(1) 5” diameter canopy with retaining screw
(1) 2” diameter canopy
(2) Suspension cables with hardware
(2) 10” - 32 flange nuts with serrations
(1) Strain relief bushing
(5) Cable ties (white plastic)

Joiner/End Fixture Hardware:
(1) Assembly & installation instructions
(1) AX2 center suspension bracket
(2) Row aligner channel/ AX2 (side btm)
(1) Row aligner channel/ AX2 (bottom)
(2) Screw, SS hex 1/4”x14” long

Each non-power feed hardware kit includes the following:
(1) T-bar mounting bracket & 1/4” - 20 stud
(1) 2” diameter canopy with 1/4” diameter
(1) Suspension cable with hardware
(1) 10 - 32 flange nuts with serrations
(1) #8 x 3/8” hex head screw

Step 1: For T-bar ceiling, install mounting brackets at desired locations (see stand-alone assembly step 1 & 2).

Step 2: Install mounting cables at desired locations. Only the first fixture in each row will require two suspension cables. Each adjoining fixture will require only one cable before attaching to the previous fixture. (Fig. 7).

Note: For safety - Always support the weight of the fixture. Do not leave a fixture hanging by only one end while working.

Step 3: To remove lens, insert a putty knife or flat blade screwdriver between the lens and channel. Pry up to get the lens loosened and then gently peel the lens up.

Step 4: For continuous row applications, use Row Aligners (installed in fixtures) for level and adjustment.

Step 5: When row mounting fixtures, joint between fixtures will have continuous row bracket. After connecting quick connects and fixtures, add continuous row bracket around fixture by snapping the bracket into place.

Step 6: Add center suspension bracket to fixtures.
